

Customer Advisory

18.12.2024

Dear Business Partners,

At MIP, we continue to keep you updated on the current situation.

- Following the system upgrade on December 1st, we have successfully reached a daily handling capacity of 6,380 TEU.
- The daily handling targets designed to ease port traffic, enhance operational flow, and improve efficiency are being met.
- Gate traffic is steadily returning to its normal flow.
- In CFS operations, efforts to expedite the processing of waiting containers are underway to restore normal operations as soon as possible.
- Yard occupancy levels have stabilised and reduced.
- Customs clearance processes are proceeding as usual.
- Berth planning for service vessels within the designated berthing windows is largely on track, and we expect normal operations to resume by the end of this week.
- Vessel Operations Efficiency indicators like GCR have recovered to pre-December levels.

We appreciate your continued cooperation and assure you that we will keep working closely with you to ensure smooth operations during this period.

Sincerely,
Mersin International Port
